

**Shoreline Community College  
Clean Energy Technology & Entrepreneurship  
Advisory Committee Meeting Minutes  
Friday, February 19, 2021  
10:00am – 11:00am, Zoom**

In attendance: Sharon Vik, Ryan Bradt, Stephanie Gowing, Lindsey Virdeh, Brian Young, Dan Luzius, Alisha Turpin, Renee Gastineau, Lauren Hadley, Kelly Griffin (note taker)

Dan opened the meeting, thanked everyone for their support and industry expertise, and facilitated introductions and approval of the October Minutes.

Louise gave some Shoreline Community College CET updates:

- The NSF grant proposal with Cascadia College was declined perhaps due to missing components.
- Shoreline CET enrollment dropped quite a bit from fall 2020 to winter 2021. There are hopes, depending on transitions with Covid restrictions, for the Solar class to be taught on campus by Alisha next fall.
- In the request for a new committee chair, current chair Dan Luzius said that it mostly involves giving the committee meeting welcome; introductions; facilitating approval of minutes; keeping the meeting going; and having discussions with Louise. Renee Gastineau volunteered and the committee approved.
- The Tesla Energy START program will begin fall 2021 with anticipation of adding 50 FTE students per year. Tesla does the recruiting within construction programs, etc., and Shoreline CET students can pick up course work.

Brian Young and Stephanie Gowing gave updates on energy and proposed legislation from their work arenas. Links with additional information and reports:

Brian mentioned more will be known, perhaps in April, after operating budget decisions are made. In terms of Shoreline program: clean energy on new buildings, healthy homes and clean buildings, and thinking big on capital projects could be things to keep in mind for training. Stephanie shared out slides with Seattle information and some of the city energy code key

changes. Dan thanked Brian and Stephanie for their insightful presentations to help the committee see where we are headed and what's currently on the table. He then turned the meeting over to Louise to wrap things up.

Louise said the next meeting will be in May. The agenda will include going over the Program outcomes sheet she emailed before the February meeting. Items 1-8 are certificate program, and items 9-10 are specific to the AAAS degree. At the May meeting, Bayta Maring will probably have an exercise in which the committee connects the outcomes to the coursework in the Program.

Questions to consider:

- How are the Program outcomes relevant and connecting with the coursework?
- How are, for example, students learning about creating energy efficient buildings, or what kind of instruction are they getting as far as solar design?
- If the outcomes need to be updated, what input can industry and government partners give, in terms of focus?

**Adjournment: 11:10am**
